

Case Study: Spam Detection

Domain: Telecom

A telecom software provider is building an application to monitor different telecom components in the production environment.

For monitoring purpose, the application relies on log files by parsing the log files and looking for potential warning or exceptions in the logs and reporting them.

The POC we had been working on, for SPAM Detection on the data of telecom operator forum, has been accepted and the stakeholders has asked us to work on the real-time example for predicting SPAM messages.

Tasks: This POC will focus on saved machine learning model for spam prediction with streaming data to do real-time prediction.

Now with model and data pipeline ready, you are required to predict the spam message on the steaming data.

Module: Mod11CS1EdSol

1. Modify the model application to train the model and persist it.

Module: Mod11CS1_Consumer

2. Create a new spark streaming application to predict the spam messages
3. Application will connect to the flume to retrieve the data
4. Load the model
5. Predict the SPAM messages and print the SPAM in the logs

Module: spam.conf

6. Test the application by sending dummy data rows from the consumer

Screen Shots:

Running the agent

```
[edureka_524533@ip-20-0-31-202 ~]$ vi spam.conf
[edureka_524533@ip-20-0-31-202 ~]$ flume-ng agent --conf conf --conf-file spam.conf --name agent1
